The diagram illustrates the experimental setup. A participant is seated at a table, looking at a video screen. On the screen, there is a starting point (a large circle) and a target (a small circle). The distance between these two points is labeled 'Distance'. The participant's hand is positioned at the starting point and is labeled 'Hand'.

Mr. MONTGOMERY E. CASSELL:

**THE UNIVERSITY OF CHICAGO**

The diagram illustrates the experimental setup for measuring the time delay of a quantum state. It shows a sequence of operations: a Hadamard gate (H), followed by a phase gate (P) with parameter  $\phi$ , then another Hadamard gate (H), and finally a measurement. The input state is  $|\psi\rangle$ , and the output state is  $|\phi\rangle$ . The time delay is indicated by a double-headed arrow between the input and output states.

## Peso rallies, nears \$1 level

By [illegible]

The Philippine peso rallied today, reaching a level near \$1. The rally was driven by a combination of factors, including a strong performance in the stock market and a decrease in the demand for dollars. Analysts expect the peso to continue its upward trend in the near future.

# The simplest way to stay healthy

By David S. Friedman

**THE WORLD HEALTH ORGANIZATION** (WHO) estimates that 1.5 million people die each year from preventable diseases. More than 50 percent of these deaths are avoidable if people take just four simple and cost-effective steps:

1. **Don't smoke.** Smoking causes more than 5 million deaths each year. Quitting now can greatly reduce the risk of dying from smoking-related diseases.

2. **Don't drink too much alcohol.** Excessive drinking leads to liver disease, heart problems, and accidents.

3. **Don't eat too much fat and sugar.** High cholesterol and obesity are major risk factors for heart disease and diabetes.

4. **Don't get too little exercise.** Regular physical activity helps maintain a healthy weight and improves heart health.

But number four is the most important.

Exercise is the simplest and most effective way to stay healthy. It helps you lose weight, lowers blood pressure, improves cholesterol levels, and boosts your immune system. Just 30 minutes of moderate exercise each day can make a big difference.

## Healthful new products, inventions

**TECHNOLOGY** is making it easier than ever to stay healthy. New products and inventions are helping people monitor their health, prevent diseases, and live longer, healthier lives.

**Smartphone Health Apps**

Smartphones are now equipped with a variety of health-related apps. These apps can track your diet, exercise, and sleep patterns. They can also remind you to take your medication and schedule doctor appointments.

Wearable devices like smartwatches and fitness trackers are also popular. They can monitor your heart rate, steps taken, and sleep quality. Some even have built-in GPS for tracking your runs or walks.

Telemedicine is another area where technology is making a difference. It allows patients to consult with their doctors remotely via video or phone. This is especially useful for people who live in rural areas or have difficulty getting to a doctor's office.

## Coincidences are more frequent now than before

**COINCIDENCES** are more frequent now than before, according to a new study. The researchers found that people are more likely to notice and report coincidences in their daily lives.

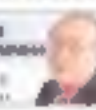

The study, conducted by psychologists at the University of California, San Francisco, found that people are more likely to notice and report coincidences in their daily lives. This is because people are more aware of their surroundings and more likely to notice unusual events.
